First program

Your name

2024-10-23

You can insert the text just like typing here

However, if you want to add the heading in the document we need to at with

Heading (Make sure you add space after #)

Smaller header can also be added

You can do till header 6

If you want to add the italics we need to words between (*word*) and for bold font we need (**word**).

We can also use (*word*) for italics and (**word**) for bold.

NoTICE, FOR ADDING SPACE BETWEEN YOU LINE YOU NEED TO HIT ENTER KEY TWO TIME

Now if you was to add subscript such as 3rd Oct, 2023

For Subscript we need (H_2O) but for strikethrough we need two ~~Hello~~.

For the equation if you write equation $x = mx + C$ and for equation in new line

$$X^2 + Y^2 = r^2$$

where

$$r \ \beta$$

Now if you want to add link, download R studio

of let add images

Now let we need to add the list of items.

1. List one
   - Sublist (not order)
     - thrid order
   a. List with name

2. Number 2

Imaging you want to add table

First Header	Second Header
Content Cell	Content Cell
Content Cell	Content Cell

There is better way to do this.

Let start adding the R codes now

```r
name = "Chandan Pandey"
x <- paste("My names is",name,sep=" ")
print(x)
```

```
## [1] "My names is Chandan Pandey"
```

using Inline command

My name is Chandan Pandey.
